Learning Aim

This study day will help delegates develop an approach for management of common gastrointestinal (GI) presentations.

Learning objectives

By attending this course delegates will be able to:

- Develop a clinical approach for the investigation and management of chronic diarrhoea
- Describe the role of probiotics in GI disease
- Develop an approach for managing functional GI disorders
- Investigate and manage a patient with abnormal liver function tests
- Manage difficult constipation
- Recognise a young person with an eating disorder and understand the principles of management
